

OSINT Losena Ltd.

Short description of the company

Why we?

The vital relevance of the proposed solutions.

There are many thousands of small and medium-size businesses (for example stocks trading firms, technology R&D companies, applicants for commercial tenders, etc.) to which a leak from their database or e-mail message can cause huge losses and consequently force them to administer costly changes in their organization's internal conduct.

By its alerting means OSINT Losena LTD. enables its customers to quickly respond to a critical leak incident and significantly minimize the customer's damage and losses.

1
B2B

Verification of the company's clients - KYC, AML and more. Protecting the company's information from leaks.

2
B2C

Prevention of information leaks, detection of already existing leaked information, alerting and minimizing losses from leaks.

Important notes about the market.

The market for the services that company offers is rapidly growing due to several factors:

1. The expanding boom in on-line financial services.
2. The across the globe correspondence with customers, sub-contractors, patent attorneys, clients, etc.
3. The growing work-from home mode that, in many cases, makes use of private devices (computers and cellphones) for working purposes.
4. The growing use of unsecured Wi-Fi nets (in coffee places, hotels, airports, etc.).
5. The frequent moving of employees to often competing or complementing employers.
6. The growing use of devices operated by IOT and the need for their protection.

While OSINT Losena provides responses to such needs, its AI based solutions are flexible and can be adapted to unforeseen changes in market demands. Thus, for example, if asked for, we can adopt the algorithms to be used for communication interception or distortion of leaking information.

The Company's core team and history

The leadership of our team is comprised of the following people: Sergei Kraizman, Vitali Sokol and Eduard Krasnopolsky.

Over the years of working in the field of Internet finance (more than 50 years of joint experience), we clearly understand all the strengths and weaknesses of storing and using vital information. In the last two years, we have been developing our proprietary cybersecurity products.

We continue to develop our algorithms, write and debug software, and prepare additional patent applications.

Up to now, we have invested over three Million NIS from our own funds.

We have already launched our software package by the end of spring 2023.

FOR POTENTIAL INVESTORS :

At the moment we are looking for potential partners and investors. To accelerate technology development, we need a serious horizontal scaling of the company.

We are ready to provide a detailed road map, financial plan and calculation of the company's development potential upon first request.

Estimated investment: \$2.5 million for 25% of the company.
